

Wound- healing, case 3

Figure 9 shows the forefoot of a 47 year old male patient injured by a rotating ship's propeller, just before the first shock wave treatment, which was applied on 9/13/2004 as an outpatient procedure without anesthetics.

Fig. 9

Figure 10 shows the same patient 3 weeks later before the third shock wave treatment.

Fig. 10

Figure 11 shows the lesion 3 weeks later before the fourth treatment.

Fig. 11

Figure 12 shows the healing status after a total of 6 shock wave treatments (total time 15 minutes) 11 weeks after starting the therapy.
